Rapidly Innovate with Stateless Akros

Enterprises are pushing their infrastructures off-premises to third party data centers and hyperscale clouds. As a cloud service provider, you are uniquely positioned to be the key link between these moving workloads.

In order to successfully deliver, you need to be able to move with the flexibility and agility the modern enterprise demands.

With Stateless Akros, you will be poised and ready.

By deploying Akros in your infrastructure, you will be able to quickly deploy customized network services that grow with your business to maximize profits and differentiate your offerings from competitors.

Quickly Deploy Customized Services

With Akros, customized network services are ready in a matter of minutes. Through a handful of simple API calls, customized configurations of network resources, or network function chains, are built for an enterprise's exact business requirements.

You are able to differentiate your offerings like never before, creating offerings on a per tenant basis without sacrificing performance or engineer time.

Grow Through Scale-Out Architecture

With Akros, you will reduce business risk in your business model thanks to a scale-out architecture.

Your network infrastructure grows with your business, making forklift upgrades and multi-year traffic forecasts a thing of the past. Instead, resources are delivered in a linear fashion.

Servers are introduced to the system on a node by node basis. You no longer have to make significant outlays on expensive appliances only to have them sit empty in your data center.

Differentiate with Innovative Pricing

Today's enterprises are growing accustomed to usage-based pricing thanks to hyperscale clouds and the widespread implementation of "as a Service" models.

Akros seamlessly enables flexible pricing models for the first time in data center networks. Thanks to an administrative Web UI and API, you can gather usage data for tenants over a given time period to charge tenants through whatever model works best for your business goals.

About Stateless

Stateless was founded with the mission of making sophisticated networks dead simple to manage. We believe in partnering with our customers to turn networking into a competitive advantage and unleashing the power of their infrastructure stack. To learn more, visit us at BeStateless.com.
