Take Control with Stateless Akros

As a network engineer, you are all too familiar with disparate network appliances that you are unable to orchestrate, customize or integrate.

Stateless Akros is a network services platform built to simplify and streamline your cloud environment so you can quickly deploy customized network services for your tenants.

The API-driven platform gives you unprecedented visibility and customization capabilities. This extends to your tenants who are able to view and modify their network settings through an easy to use dashboard

Simplified Infrastructure with Rich APIs

One of the largest struggles for network engineers today is the poor-quality APIs of existing network appliances. Operators are left with a collection of disparate physical and virtual appliances that they are unable to orchestrate or control.

The Akros API allows you to overcome these challenges and streamline your network infrastructure. Once difficult tasks require minimal effort as the platform controls all functions across your network.

API calls automate every aspect of your network including configuration, resource management, QoS, reporting and billing. Any tasks you can perform in the Web UI can be completed via API call, freeing your time to complete new projects and push your business forward.

The API also enables integrations with existing systems that you use to manage your infrastructure in its entirety. In the future, Akros will seamlessly integrate with products like OpenStack and vSphere through plug-ins.

Tenant Dashboard

The rich data from the Akros API is passed on to tenant users who are given view into their network through a portal. The Akros tenant portal gives users control while abstracting away complexity associated with large scale network management.

Tenants have control to modify their own network in isolation. Modifications made in the tenant portal will not affect the underlying platform or another tenant's network.

By providing tenants with insight and control, you will experience a decrease in trouble tickets and tenant requests, freeing your time to think strategically about your infrastructure.

About Stateless

Stateless was founded with the mission of making sophisticated networks dead simple to manage. We believe in partnering with our customers to turn networking into a competitive advantage and unleashing the power of their infrastructure stack. To learn more, visit us at BeStateless.com.
